

Sustainable Fleet Plan Sheet

[Back](#)

[Return to Introduction Page](#)

The purpose of this tab is to verify that your fleet has developed a work plan or strategy document for taking steps over three or more years to make the fleet more sustainable as defined by NAFA. The format of the plan can be flexible, but should include a simple, clear statement how the organization intends to reduce the environmental impact of its fleet, and its yearly goals. It is beneficial if the leaders of the organization commit to high level sustainability goals that empower staff and give guidance to move ahead.

Does your fleet have a Sustainable Fleet Plan and is it submitted?	Yes
Please provide a Sustainable Fleet Plan that includes the following minimum requirements: - Goal: Establish sustainability as a fleet management goal - Reduction metrics: Develop sustainability metrics (establish a baseline with % reductions – fuel or emissions, or efficiency improvements – in given time period – 3 to 5 years) - Measures: Establish measuring mechanisms (monitoring tools/analytics) to track, benchmark, and report on fleet fuel consumption - Review: Develop a process for an internal annual review of sustainable fleet plan and policy	
Please identify the document name and page number associated with each element above (in the box to the left, where applicable.)
